

CRITICAL-TO-SATISFACTION (CTS) SUMMARY

Order Processing Efficiency Improvement Project

1. VOICE OF CUSTOMER (VOC) COLLECTION

Method: Conducted 5 customer interviews and 12 web-based surveys (November 2025)

Customer Sample:

- 3 repeat customers (annual revenue: \$50K-\$150K each)
- 2 new customers (testing service)
- 12 survey respondents (online customers, random sample)

Response Rate: 95% response rate on surveys (12 of 12 sent)

2. VOICE OF CUSTOMER - RAW FEEDBACK

#	Customer Quote (VOC)	Frequency in Interviews	Importance Rating
1	"I need my orders delivered within 2 days - your current 4+ days is a problem"	5 of 5 customers	Critical (100%)
2	"Orders need to be correct - I shouldn't have to reorder missing items"	5 of 5 customers	Critical (100%)
3	"I want to be able to track my order in real-time"	4 of 5 customers	High (80%)
4	"Returns are a hassle - I want to return items easily without problems"	3 of 5 customers	High (60%)
5	"Your inventory shows items as in-stock but they're not - very frustrating"	3 of 5 customers	High (60%)
6	"Customer service is good, but they can't always tell me when my order will arrive"	2 of 5 customers	Medium (40%)

3. CTS TRANSLATION - VOC TO INTERNAL REQUIREMENTS

CTS #	Customer Requirement (VOC)	Internal Translation (CTS)	Measurable Metric	Current Baseline	Target Goal
CTS-1	"Fast delivery within 2 days"	Order processing cycle time ≤ 2 business days	Average cycle time (days)	4.2 days	2.0 days (95% of orders)
CTS-2	"Orders complete and correct, no missing items"	Order fulfillment accuracy / First-pass yield ≥ 99.5%	% of orders with no errors	92%	99.5%
CTS-3	"Real-time order tracking visibility"	Order tracking accuracy and update frequency ≥ 99%	% of orders with accurate status in system	85%	99%
CTS-4	"Returns process should be easy and hassle-free"	Return processing time ≤ 1 business day from receipt	Average return processing time (days)	2.1 days	1.0 day
CTS-	"Inventory information must be		% accuracy of inventory records		

5	accurate"	Inventory data accuracy ≥ 99.8%	vs. physical stock	94%	99.8%
---	-----------	---------------------------------	--------------------	-----	-------

4. CTS PRIORITIZATION

Priority 1 (Must Have - Project Must Achieve):

CTS-1: Cycle Time ≤ 2 days (95% of orders) - Most frequently mentioned, highest impact on customer satisfaction

CTS-2: Accuracy ≥ 99.5% - Equally critical, direct customer impact

Priority 2 (Should Have - Project Should Achieve):

CTS-3: Tracking Accuracy ≥ 99% - Supports cycle time improvement, improves customer confidence

CTS-5: Inventory Accuracy ≥ 99.8% - Fundamental to achieving cycle time and accuracy targets

Priority 3 (Nice to Have - Post-Project):

CTS-4: Return Processing ≤ 1 day - Important but secondary; may be separate project

5. CRITICAL-TO-QUALITY (CTQ) TRANSLATION

How CTS Translate to Internal Quality Characteristics:

CTS	Process Step Affected	Quality Characteristic (CTQ)	How to Measure
CTS-1 Cycle Time	All process steps	Minimized process delays at each step (picking, packing, QC, shipping)	Time-stamp each transaction; track duration per step
CTS-2 Accuracy	Order receipt, picking, packing, QC	Error-free order fulfillment at each step	Count errors by type; calculate error rate; track rework
CTS-3 Tracking	Order receipt, shipping	Real-time system updates; data accuracy	Cross-reference system records with actual shipments
CTS-5 Inventory Accuracy	Inventory management, picking	Stock record accuracy; proper location coding	Physical counts vs. system records; discrepancy analysis

6. CUSTOMER SATISFACTION MEASUREMENT PLAN

Post-Project Customer Satisfaction Survey:

- **Frequency:** Monthly after project completion
- **Sample:** 20 random order customers per month
- **Questions:**

- Delivery speed meets expectations (1-10 scale)
- Order arrived complete and correct (yes/no)
- Able to track order (1-10 scale)
- Overall satisfaction (1-10 scale)
- **Target:** 9.0+ overall satisfaction score (vs. current 6.8)

7. CTS LINKAGE TO PROJECT GOALS

How Project Success is Defined:

- ✓ CTS-1: 95% of orders processed in ≤ 2 days = Project achieves timeline goal
- ✓ CTS-2: Accuracy improves to 99.5% = Reduced customer complaints, revenue protection
- ✓ CTS-3 & CTS-5: Achieved = Supports primary CTS goals, builds customer confidence
- ✓ Customer satisfaction improves from 6.8 $\rightarrow$ 9.0+ = Ultimate project success indicator
