

Pareto Analysis – Main Causes of Long Checkout Waits

This page summarizes the Pareto analysis of the reasons behind “long waits” (over 7 minutes). You can paste an image of your chart below and keep the simple table as backup.

Summary Table for Pareto Chart

Cause of Long Wait (> 7 min)	Count	Percent of Total	Cumulative Percent
Only one cashier open	34	40%	40%
Price lookup for custom drinks	22	26%	66%
Slow card payment / network delay	15	18%	84%
New staff training	8	9%	93%
Other misc. issues	6	7%	100%

Interpretation (Plain Language)

- About two-thirds of long waits come from just two causes: only one cashier open and slow price lookups.
- If the shop can keep two cashiers open during peak times and simplify/customize drink buttons, many long waits should disappear.
- Card payment delays and new staff training matter, but less than the first two causes.
